PROFILE

Second-year Computer Engineering student at LIU building offensive-security skills through regular hands-on labs (TryHackMe top 1% worldwide, PortSwigger Web Security Academy) alongside a remote Software Engineering internship. Looking for a part-time or remote cybersecurity internship where I can learn on a real team.

HANDS-ON CYBERSECURITY

- **TryHackMe:** top 1% of users worldwide, profile: tryhackme.com/p/HassanH. Completed the Pre Security and Cybersecurity 101 paths and all 14 days of the Hacker Holidays 2026 CTF (OSINT, web application security, digital forensics, AI security). Currently working through the Jr Penetration Tester path.
- **PortSwigger Web Security Academy:** completed the Server-side vulnerabilities and SQL injection learning paths; now working through access control (IDOR) and XSS with Burp Suite.
- **Lab skills:** network scanning and enumeration, exploitation and post-exploitation, password cracking, Windows forensics and PowerShell CTF challenges.
- **Study notes:** public notes on web vulnerabilities (IDOR, SQLi, XSS, SSRF, JWT) and pentest methodology: github.com/hassan-huss/cybersecurity

TECHNICAL SKILLS

Security Tools: Nmap, Gobuster, Burp Suite, Metasploit, John the Ripper, hashcat

Systems & Networking: Linux, Windows command line, networking fundamentals

Programming: Java (OOP), Spring Boot, Python, C++ (Arduino), React.js

Databases & Tools: MySQL, Git/GitHub, Jira, Notion

EXPERIENCE

Software Engineering Intern, Java/Spring Boot Track — TechTalks

Aug 2026 – Oct 2026

Remote, team-based

- Building QCare, a clinic booking and live-queue web app, in a five-person team; working full stack with React, Java/Spring Boot and MySQL
- Built the doctor dashboard (patient in the chair, live waiting queue, today's appointments, patient history) and appointment rescheduling for patients and reception
- Built phone-and-password sign-in (BCrypt hashes, JWT sessions); registration ignores any client-supplied role (tested: a RECEPTIONIST request creates a patient)
- Built change-password and forced first-login password change for staff: user taken from the token, current password re-checked; tests cover wrong, weak and reused passwords and the old password failing afterwards
- Wrote access tests for the admin area (401/403 on every admin endpoint, by role); fixed the bugs they found, including a sign-in response that revealed whether a removed account existed, and a last-admin lockout
- Work in Agile-style sprints with pull-request review using Git/GitHub, Jira and Notion

TRAINING & COMPLETIONS

- **TryHackMe — Cybersecurity 101 Learning Path** (Sep 2026, ID: THM-YM587Y7TG2)
- **TryHackMe — Hacker Holidays 2026 CTF** (Aug 2026, ID: THM-YCIRVYUMVW)
- **The Cybersecurity Threat Landscape** — LinkedIn Learning

EDUCATION

Lebanese International University (LIU)

2025 – 2028 (expected)

B.S. in Computer Engineering — Tripoli, Lebanon

PROJECTS

Autonomous Firefighting Robot

Introduction to Engineering final project

- Built and programmed a 4WD Arduino robot that detects fires with analog flame sensors and extinguishes them with a water sprayer, with no human input

LANGUAGES

Arabic (Native) • English (Fluent) • French (Basic)
