PROFILE

Second-year Computer Engineering student at LIU building offensive-security skills through regular hands-on labs (TryHackMe top 1% worldwide, PortSwigger Web Security Academy) alongside a remote Software Engineering internship. Looking for a part-time or remote cybersecurity internship where I can learn on a real team.

HANDS-ON CYBERSECURITY

- **TryHackMe:** top 1% of users worldwide. Completed the Pre Security and Cybersecurity 101 paths and all 14 days of the Hacker Holidays 2026 CTF (OSINT, web application security, digital forensics, AI security). Currently working through the Jr Penetration Tester path.
- **PortSwigger Web Security Academy:** completed the Server-side vulnerabilities and SQL injection learning paths; now working through access control (IDOR) and XSS with Burp Suite.
- **Lab skills:** network scanning and enumeration (Nmap, Gobuster), exploitation and post-exploitation with Metasploit, password cracking (John the Ripper, hashcat), Windows forensics and PowerShell CTF challenges.

TECHNICAL SKILLS

Security Tools: Nmap, Gobuster, Burp Suite, Metasploit, John the Ripper, hashcat

Systems & Networking: Linux, Windows command line, networking fundamentals

Programming: Java (OOP), Spring Boot, Python, C++ (Arduino), React.js

Databases & Tools: MySQL, Git/GitHub, Jira, Notion

EXPERIENCE

Software Engineering Intern, Java/Spring Boot Track — TechTalks

Aug 2026 – Oct 2026

Remote, team-based

- Building QCare, a clinic booking and live-queue web app, in a five-person team; working full stack with React, Java/Spring Boot and MySQL
- Built the doctor dashboard page: the patient in the chair, the live waiting queue, today's appointments and patient history
- Implemented appointment rescheduling (backend endpoint and screens) and account security features such as change-password and forced password change for staff
- Work in Agile-style sprints using Git/GitHub, Jira and Notion; researched target customers, the local market and competitor gaps for the product-validation report

CERTIFICATIONS & TRAINING

- **TryHackMe — Cybersecurity 101 Learning Path** (Sep 2026, ID: THM-YM587Y7TG2)
- **TryHackMe — Hacker Holidays 2026 CTF** (Aug 2026, ID: THM-YCIRVYUMVW)
- **The Cybersecurity Threat Landscape** — LinkedIn Learning

EDUCATION

Lebanese International University (LIU)

2025 – 2028 (expected)

B.S. in Computer Engineering — Tripoli, Lebanon

PROJECTS

Autonomous Firefighting Robot

Introduction to Engineering final project

- Built a 4WD Arduino robot (L298N motor driver, DC motors) that detects fires with analog flame sensors and extinguishes them with a water sprayer, with no human input
- Simulated the circuit in Tinkercad before assembly and programmed the Arduino firmware for sensor input and motor/sprayer control

LANGUAGES

Arabic (Native) • English (Fluent) • French (Basic)
